Reasons for Allowance

The present invention relates to a process for improving the performance of a catalyst, which comprises several steps including the contacting of mixed metal oxide catalyst of the Formula depicted in claim 2 with one of the following: alcohols, organic acids and inorganic acids. The catalyst is then calcined in non-oxidizing atmosphere in the presence of a source of halogen. The closest prior art is to Ushikubo et al, U.S Patent No. 5,281,745. The process described in this application differ from the prior art in that the catalyst used in this application is prepared by calcining the insoluble mixed metal oxide catalyst in a non-oxidizing atmosphere in the presence of a source of halogen. The prior art does not disclose or fairly suggest a process for producing a mixed metal oxide catalyst as described in the present application.
